

Cannon Boiler Works

Ultramizer®

Cannon Boiler Works is making the Ultramizer commercially available to all new or existing boiler systems with the potential of system efficiencies to 95% .

CANNON ULTRAMIZER SYSTEM

Features include:

- 10-15% Gain in Boiler Efficiency*
- 10-15% Reduction in GHG*
- Significant water capture and return—up to 40% of available*
- Ease of installation and maintenance*
- Multiple installation scenarios*
- Designed for the lowest possible cost of steam system operation*
- Cannon is developing this product for boilers sized from 100 - 3,000 BHP*

Technology developed by Gas Technology Institute
US patent numbers 6,517,607 and 7,066,396

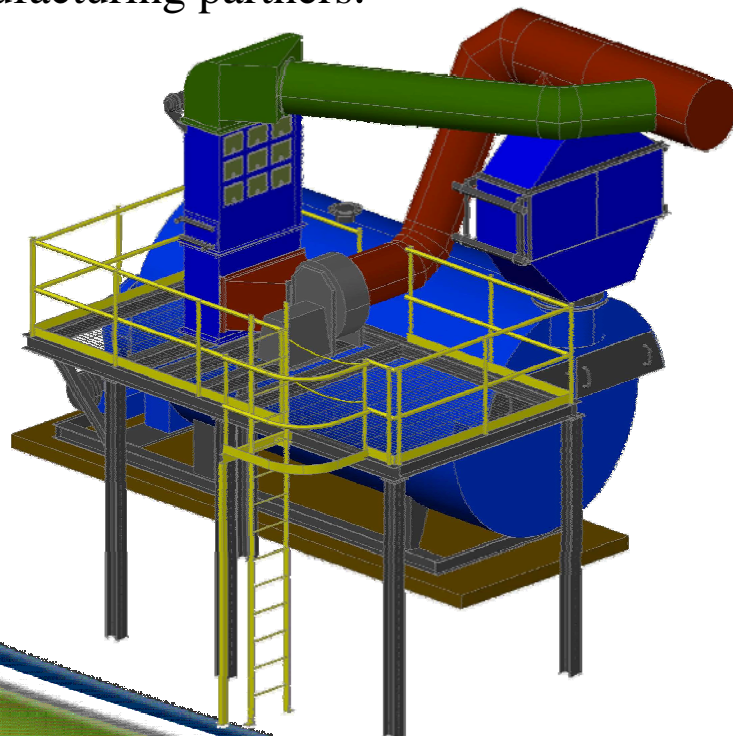

Cannon Boiler Works

Ultramizer®

The Ultramizer® is the most advanced boiler-proper waste heat recovery device available.

The Ultramizer can be used on any clean fuel boiler to potentially raise the efficiency to an unprecedented level of 95%, while returning of clean water to the system.

The Ultramizer, using transport membrane condenser technology (TMC), is a culmination of concerted efforts by the U.S. Department of Energy (DOE), Gas Technology Institute (GTI), natural gas utilities, state energy and environmental associations, and manufacturing partners.
